

Appl. No. 10/721,660

Amdt. dated March 30, 2007

Request for continued examination after final office action of November 27, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-46 (canceled)

Claim 47 (previously presented): A method of operation for a navigation system comprising:
 using a repository for geographic data, wherein the repository contains a plurality of pre-computed parcels of geographic data, wherein each of said parcels of geographic data corresponds to a separate one of a plurality of geographic sub-areas into which a geographic region is divided;
 calculating a route from an origin to a destination; and
 providing to a local memory from said repository a plurality of parcels corresponding to said geographic sub-areas said route passes through.

Claim 48 (previously presented): The method of Claim 47 wherein said parcels of geographic data are less than a maximum data size.

Claim 49 (previously presented): The method of Claim 47 further comprising:
 on a server, receiving a request for said route; and
 sending to a client computing platform said parcels corresponding to said geographic sub-areas said route passes through to a client computing platform.

Claim 50 (previously presented): The method of Claim 47 further comprising:
 storing said provided parcels in a memory.

Claim 51 (previously presented): The method of Claim 47 further comprising:
 using data from said provided parcels to display a map.

Appl. No. 10/721,660

Amtd. dated March 30, 2007

Request for continued examination after final office action of November 27, 2006

Claim 52 (previously presented): The method of Claim 47 further comprising:
using data from said provided parcels to explicate said route.

Claim 53 (previously presented): The method of Claim 47 further comprising:
using data from said provided parcels to find information about a point of interest based
upon specified criteria.

Claim 54 (previously presented): The method of Claim 53 wherein the specified criteria include
location-based criteria.

Claim 55 (previously presented): The method of Claim 47 wherein the repository includes a
plurality of collections of geographic data, wherein each collection represents the entire
geographic region, wherein each collection is organized into a plurality of parcels, each of said
parcels is less than a maximum size, and wherein the parcels in one of said plurality of
collections contains data that represents different attributes of the represented geographic
features than the parcels in another of said plurality of collections.

Claim 56 (previously presented): A navigation system comprising:
a repository for geographic data, wherein the repository contains pre-computed parcels of
geographic data, wherein each of the pre-computed parcels of geographic data corresponds to a
separate one of a plurality of geographic sub-areas into which a geographic region is divided;
a route calculation application that calculates a route from an origin to a destination; and
a geographic data providing application that provides to a local memory from said
repository a plurality of parcels corresponding to said geographic sub-areas said route passes
through.

Claim 57 (previously presented): The navigation system of Claim 56 wherein said pre-computed
parcels of geographic data have a substantially uniform data size.

Appl. No. 10/721,660

Amdt. dated March 30, 2007

Request for continued examination after final office action of November 27, 2006

Claim 58 (previously presented): The navigation system of Claim 56 wherein said repository for geographic data and said geographic data providing application are associated with a server.

Claim 59 (previously presented): The navigation system of Claim 56 further comprising:
a route guidance application that uses data contained in said parcels from said local memory to provide maneuvering instructions for following said route.

Claim 60 (previously presented): The navigation system of Claim 56 further comprising:
a map display application that uses data contained in said parcels from said local memory to provide a map of said route on a display.

Claim 61 (previously presented): The navigation system of Claim 56 further comprising:
a positioning application that uses data contained in said parcels from said local memory to determine a position of a end user computing platform relative to roads represented by data contained in said parcels.

Claim 62 (previously presented): The navigation system of Claim 56 further comprising:
a positioning application that uses data contained in said parcels from said local memory to determine whether an end user computing platform has departed from said route.

Claim 63 (previously presented): The navigation system of Claim 62 wherein if said end user computing platform has departed from said route, said positioning application calculates a way back to said route using data contained in said parcels from local memory.

Appl. No. 10/721,660

Amdt. dated March 30, 2007

Request for continued examination after final office action of November 27, 2006

Claim 64 (previously presented): A method of operation for a navigation system comprising:
 using a repository for geographic data, wherein the repository contains a plurality of
 parcels of geographic data, wherein each of said parcels contain routing data corresponding to a
 separate one of a plurality of geographic sub-areas into which a geographic region is divided;
 calculating a route from an origin to a destination; and
 providing to a local memory from said repository a plurality of parcels of routing data
 corresponding to geographic sub-areas located along said route.

Claim 65 (previously presented): The method of Claim 64 further including:
 using data from said parcels in said local memory to provide navigation-related features.
